John William Davis

Full-Stack Developer · TypeScript & React

Greater Seattle Area, WA | 206.992.9486 | jwdavisdeveloper@gmail.com
johnwilliamdavis.com | github.com/papadavis47 | linkedin.com/in/john-william-davis

SUMMARY

Full-stack developer building TypeScript web apps with React, TanStack Start, and Next.js on Supabase and Postgres. I work with coding agents every day, running Claude Code and Amp in parallel, and I review what they write. I also build command-line tools in Rust. Coding since 2017, General Assembly graduate, and 13 years as an EMT in King County before that.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL, HTML, CSS, Rust, Python
Frontend: React, Next.js, TanStack Start, Astro, Vue / Nuxt, Tailwind CSS, Panda CSS
Backend & Data: Node.js, Bun, Supabase (Postgres, Row Level Security), Drizzle ORM, Turso / libSQL
AI-assisted dev: Claude Code, Amp, Delta, MCP servers, git worktrees for parallel agents
Tools: Git, GitHub, Vercel, Docker, Linux, Zed

PROJECTS

Self-directed and open source · github.com/papadavis47

I want you to know · Digital legacy vault for parents — *TanStack Start · React · Supabase · Drizzle · Panda CSS*

- A place for parents to collect letters, text notes, voice notes, and photos for their children to keep after they are gone.
- Designed the database schema and the design token system.
- Created the brand: three logo families, plus a script that generates the full asset pack from source.

Agentic workflow · How I work day to day — *Claude Code · Amp · MCP · Zed*

- Run Claude Code and Amp in parallel on separate git worktrees, each guided by project instruction files (CLAUDE.md, AGENTS.md).
- Set up the same MCP servers (Supabase, Panda CSS) across Claude Code, Amp, and Zed.

Familia · Web app and terminal app on one database — *Next.js · Python · Textual · Turso*

- Both apps keep a local copy of the database that syncs to Turso's cloud. The web app is deployed on Vercel.

comfortablefeelingdumb.com · My long-running programming blog — *Next.js · MDX · Vercel*

- Rebuilt it with like and view counters, generated social images, dark mode, and page transitions.

Sokay · Mindful eating tracker — *TanStack Start · Supabase · Drizzle*

- Food tracking built around moderation instead of restriction.

Rust command-line tools · Mountains, caleb, Mija — *Rust · ratatui · clap · Turso*

- A trail running log with daily elevation streaks, a task manager for coding sessions, and a Pomodoro timer. Mountains and caleb install with `cargo install`.

EXPERIENCE

Rideshare & Delivery Driver · Independent contractor — 2018 – Present

- Drove and delivered for Uber, Lyft, Uber Eats, and Amazon, and delivered auto parts, supporting my family while studying software and building these projects.

Emergency Medical Technician · American Medical Response — May 2005 – Sep 2018

- Provided basic life support and emergency transport for patients across the Seattle area.
- Worked calls alongside King County fire departments and King County Medic One.

EDUCATION

Software Engineering Immersive · General Assembly, Seattle — Jan 2020 – Apr 2020

12-week, 400+ hour full-time program in full-stack development.
